Currie Rose Reports a New Gold Discovery in Tanzania

Currie Rose Resources Inc. has been informed by its joint venture partner Sub-Sahara Resources NL that drilling has intersected significant gold mineralisation at the Mwamazengo prospect within the Mabale Hills Project in the Lake Victoria Greenstone belt in Tanzania. (See map on website, www.currierose.com).

Drill Highlights - Mwamazengo Prospect - Tanzania

MBNR-001 intersected **32metres @ 3.70g/t** gold from 4 metres
MBNR-002 intersected **12metres @ 3.08g/t** gold from 11 metres
MBNR-003 intersected **20metres @ 1.57g/t** gold from 23 metres
MBNR-004 intersected **14metres @ 3.18g/t** gold from 54 metres

The programme consisted of 1,385 metres of drilling consisting of 4 Reverse Circulation (RC) drill holes totalling 450 metres and 19 Rotary Air Blast (RAB) drill holes totalling 935metres.

The 4 RC holes were designed to test the colonial Mwamazengo workings while the RAB drilling was designed to test for potential parallel mineralisation and strike extensions.

The 4 RC drill holes (MBNR – 001 to MBNR – 004) were drilled approximately 90 metres apart over a strike length of 225 metres. RAB drilling failed to close off mineralisation to the south and very weak mineralisation was encountered approximately 150metres north of MBNR -004 (the most northern RC drill hole). As a result, mineralisation is open in both directions and at depth.

Table 1: Mwamazengo Prospect - Significant Drill Intersections (See Note for sampling details)

Hole Id	Easting (UTM)	Northing (UTM)	Dip (°)	Azimuth (°)	Depth (m)	From (m)	To (m)	Interval (m)	Au (g/t)
MBNR-001	482,114	9,650,168	-50	90	93	4.0	36.0	32	3.70g/t
				including		15	22	7	6.32g/t
				including		24	35	11	4.61g/t
MBNR-002	482,144	9,650,084	-50	90	100	11	30	12	3.08g/t
MBNR-003	482,121	9,649,998	-50	90	107	23	43	20	1.57g/t
				including		26	32	6	4.18g/t
MBNR-004	482,092	9,650,240	-50	90	150	54	68	14	3.18g/t

The joint venture partners are very pleased with these results and the Mwamazengo prospect represents one area within the 178km² Mabale Hills Project.

The drill has been moved to the Jubilee Reef Project and drilling is underway.

ON BEHALF OF THE BOARD OF DIRECTORS

“Harold Smith”

Harold Smith, President

Notes:

1. All Assay values are uncut
2. As there is insufficient data to calculated true widths, drill intercept lengths only are reported.

3. A Quality Assurance/Quality Control program is part of the drilling program on the Mabale Hills Project. This program includes chain of custody protocol as well as systematic submittals of standards, duplicates and blank samples into the flow of samples produced by the drilling.
4. A description of the geology, sampling procedures, and the Company's laboratory Quality Assurance / Quality Control procedures are as described in the Company's National Instrument 43-101 Technical Report filed on March 21, 2005. This report is available at www.sedar.com.
5. Samples are prepared and analysed at Humac Laboratories – Mwanza, Tanzania
6. The Qualified Person for the release of this exploration information is Michael Griffiths AusIMM, Director of Currie Rose Resources Inc. and Chief Executive Officer/ Director of Sub-Sahara Resources NL
