## **NEWS RELEASE**

TRADING SYMBOL: CUI

Date: September 15, 2003

Currie Rose Resources Inc. announces that drilling has commenced on its Scadding gold property near Sudbury, Ontario. A drill is currently being mobilized on the property by JML Resources Ltd. which can earn a 50% interest in the property from Currie Rose Resources Inc. by spending a total of \$3 million in exploration expenditures. The exploration commitment in the first 12 months is \$300,000.

The present property contains the former Scadding gold mine where limited production in the 1980s totalled approximately 140,000 tons grading 0.21 ounces/ton. Gold production occurred from 4 shallow zones, three of which are still open along strike and at depth. Gold mineralization is hosted within chlorite-rich shear zones and chlorite-rich breccias zones of the Serpent Formation sediments. Detailed historical exploration concentrated within the immediate "mine area" representing approximately 5% of the present property.

JML's initial exploration program will include a drill program to test the gold content and geometry of the known gold zones. Additional drilling and geophysics will potentially expand the known gold zones in the immediate mine area and will assist in locating additional gold zones on the property.

A technical report on the Scadding property prepared for Currie Rose Resources Inc. which documents the historical work on Scadding, including the most recent drill results completed in 1997/98, will be posted on the Currie Rose Resources website, [www.currierose.com](http://www.currierose.com).

ON BEHALF OF THE BOARD OF DIRECTORS  
CURRIE ROSE RESOURCES INC.

"Harold Smith"  
Harold Smith, President
