NEWS RELEASE

Multiple Gold Zones Identified At Scadding Gold Property

Currie Rose Resources Inc. has been informed by the Company's joint venture partner of the encouraging drill results from the North Target Area of the Scadding Gold Property located 50km northeast of Sudbury, Ontario. Drilling at the North Target Area has successfully intersected multiple gold zones occurring in a distinct larger alteration envelope. The North target Area is one of four occurrences known on the property where gold was mined during the 1980s.

Significant assay results from JML-03, 04, 06 and 07 are tabulated below.

Drill Hole	Intersection From – to Meters	Interval		Gold Grade	
		Meters	Feet	g/t Au	Ounces/ton
JML-03*	8.0-12.5	4.5	14.8	6.9	0.20
includes	8.0-10.5	2.5	8.2	11.8	0.33
includes	9.5-10.5	1.0	3.3	26.0	0.76
	28.0-32.5	4.5	14.8	3.6	0.10
includes	28.0-30.0	2.0	6.6	5.9	0.17
includes	28.0-29.0	1.0	3.3	10.3	0.30
JML-04	30.0-35.0	5.0	16.4	5.3	0.15
includes	30.0-32.0	2.0	6.6	12.9	0.38
JML-06	60.85-62.0	1.15	3.8	4.2	0.12
	64.5-72.5	8.0	26.3	3.4	0.10
includes	64.5-66.0	1.5	4.9	5.3	0.15
includes	70.5-72.5	2.0	6.6	7.3	0.21
JML-07	16.5-18.5	2.0	6.6	7.8	0.23
	37.5-42.5	5.0	16.4	5.4	0.16
includes	38.0-41.0	3.0	9.9	6.3	0.18
includes	40.5-42.5	2.0	6.6	7.2	0.21
	49.5-50.0	0.5	1.6	17.0	0.50

*Confirmation of Currie Rose drill hole CR-03. Widths of holes 4, 6, and 7 represents estimated true width. No significant mineralization was intersected in hole 5 which intersected a diabase dyke.

Holes JML-03 to 06 along with previously released holes 1 and 2 (which included an intercept of 9 g/t over 7 meters - see press release October 2, 2003) were drilled along a north-south fence across the North Zone Target Area. The fence of holes intersected continuous, gold-rich breccia zones associated with chlorite alteration and iron-rich sulphides.

Hole JML-07 was drilled approximately 25 meters west of the fence of holes (1 to 6) and intersected similar multiple gold-rich breccia zones under an east-west striking open cut where gold had been mined to a vertical depth of 7 meters.

Holes 8 and 9, drilled approximately 60 meters east of holes 1 to 6, intersected chlorite- altered breccia zones; they are currently being logged and will be sent for assay.

To date, all gold zones at the North Target Area are associated with chlorite and iron-rich sulphides. Importantly, these gold zones are located within a distinct 75 to 100 metre thick stratigraphic envelope which is associated with carbonate alteration and intense albitization of the original host rocks. This stratigraphic envelope strikes approximately east-west, dips southward and is open along strike and at depth.

“The grade and extent of the gold mineralization at the North Target Area is extremely encouraging” said Ken Lapierre, President of JML Resources. “The fact that gold zones at the North Target Area are open in three dimensions and that they occur within a much larger alteration envelope bodes well for following and locating additional gold-rich zones at Scadding. Continued exploration will focus on extending the gold zones within the alteration envelope at the North Target Area as well as establishing the potential recurrence of this type of system with other known gold zones on the property”.

Ongoing exploration includes drilling, high resolution magnetometer and induced polarization surveys.

The drill program is being conducted under the supervision of Ken Lapierre P.Geol., the Q.P. for JML Resources.

ON BEHALF OF THE BOARD OF DIRECTORS
CURRIE ROSE RESOURCES INC.

“Harold Smith”
President
