**Currie Rose Reports Completion of Airborne Magnetic Survey at  
Mabale Hills in Tanzania**

Currie Rose Resources Inc. (the “Company”) is pleased to announce that a close spaced airborne magnetic survey has been completed over the entire Mabale Hills project covering the Mwamazengo discovery and other known targets such as Susu River that covers the southern extension of Gallery Gold’s Kitongo gold deposit.

The survey was completed by New Resolution Geophysics (NRG) of South Africa and covers a total of 2,190 line kilometres in the East – West direction at spacing of 100 metres with tie lines at 500 metres.

The data will now be processed and is expected to identify new high quality drill targets in the vicinity of the Mwanazengo deposit. A first pass image showing the raw processed data can be found on the website ([www.currierose.com](http://www.currierose.com))

Although full processing has not been completed, the Company is very encouraged by the data to date as it clearly defines the Mwamazengo discovery and shows a number of other “look-alike” targets.

ON BEHALF OF THE BOARD OF DIRECTORS

“Harold Smith”

Harold Smith, President
