**ENCOURAGING RESULTS FROM FIRST HOLES AT THE MABALE HILLS  
PROJECT, TANZANIA**

Currie Rose Resources Inc. is pleased to announce that the results from the first two (2) reverse circulation drill holes at the Mwamazengo gold discovery have further confirmed the gold potential discovered during 2005.

- Drill hole MBNR021 returned a single intercept of 15metres grading 4.7 g/t gold from 18 metres (including 3 metres grading 9.65g/t gold) and,
- Drill hole MBNR022 returned 3 separate intercepts:
  - 5 metres grading 1.22g/t gold from 9 metres
  - 6 metres grading 1.46g/t gold from 31 metres and
  - 6 metres grading 2.09g/t gold from 63 metres

Both drill holes tested the “up-dip” potential of the Mwamazengo zone and have confirmed the mineralization. See Mabale Hills Second Drill Map at [www.currierose.com](http://www.currierose.com).

Reverse circulation pre-collars with diamond drill tails are in progress and further results will be announced over the coming weeks.

ON BEHALF OF THE BOARD OF DIRECTORS

“Harold Smith”

Harold Smith, President
