**NEWS RELEASE**

TRADING SYMBOL: CUI.V  
December 4th, 2007

**Mwamazengo Gold prospect in Tanzania extended to depth**

**Highlights**

- MBNR-D037 - 4 metres grading 7.46g/t gold from 192 metres at Mwamazengo
- MBNR-043 – 9 metres grading 1.99g/t gold from 0 metres at Mwamazengo
- MBNR-D046 – 3 metres grading 6.77g/t gold from 227 metres at Mwamazengo
- MBNR-D047 – 5 metres grading 3.89g/t gold from 155 metres at Mwamazengo

Currie Rose Resources (TSX-V: CUI) advises that the recent phase of drilling on the Mabale Hills project in Tanzania Africa, which forms part of the Lake Victoria Joint Venture with Australian-listed Sub-Sahara Resources NL (ASX: SBS), has been completed and all assay results have been returned. (See map on website, [www.currierose.com](http://www.currierose.com) ).

The drill programme, totaling 14 holes for 2,125.5m, was designed to test up and down dip extensions to the known mineralisation (MBNRD037, 045, 046, 047, 048 and MBNR042, 043, 044) and was successful in extending the vertical depth of gold mineralisation to over 200m.

Some drill holes were also designed to test for a possible northeast (MBNR038, 039 and 050) and southerly strike extension (MBNR040, 041 and 049) to the gold mineralisation. Only minor mineralisation was intercepted in holes MBNR038, 039 and 040. The southern traverse of drill holes was not considered definitive as hole MBNR049 failed to reach depth due to drill rig failure and the mineralisation is thought to be plunging in this direction. The current strike extent of known gold mineralisation is 320m,

A geophysical programme of Induced Potential (IP)/Resistivity is underway at Mabale Hills to help identify new zones for drill testing and to assist with the interpretation of strike extensions to the areas of known gold mineralisation at Mwamazengo and Dhahabu Prospects. Management is encouraged by these results as they extended the known gold mineralisation.

Significant gold assay results, that complete reporting for the latest drilling at Mwamazengo, are given in Table 1 below:

**Table 1- Significant drill intercepts for gold – Mwamazengo Prospect**

Hole	From (m)	To (m)	Interval (m)	Gold (g/t)
MBNR-D037	92	94	2	7.33
MBNR-D037	192	196	4	7.46
MBNR-038	90	91	1	2.15
MBNR-039	57	58	1	2.43
MBNR-039	99	101	2	3.23
MBNR-040	102	103	1	1.07
MBNR-042	39	45	6	1.18
MBNR-043	0	9	9	1.99
MBNR-044	59	62	3	2.54
MBNR-D045	179	184	5	1.61
MBNR-D046	227	230	3	6.77
MBNR-D047	77	80	3	1.61
MBNR-D047	155	160	5	3.89
MBNR-D047	188	189	1	1.75
MBNR-D047	203	205	2	1.88
MBNR-D047	216	217	1	1.98
MBNR-D048	207	208	1	1.15
MBNR-D048	247	248	1	1.15

(See Notes below)

ON BEHALF OF THE BOARD OF DIRECTORS

“Harold Smith”

Harold Smith, President

The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this news release.

**Notes:**

1. All Assay values are uncut
2. As there is insufficient data to calculate true widths, drill intercept lengths only are reported.
3. A Quality Assurance/Quality Control program is part of the drilling program on the Mabale Hills Project. This program includes chain of custody protocol as well as systematic submittals of standards, duplicates and blank samples into the flow of samples produced by the drilling.
4. A description of the geology, sampling procedures, and the Company's laboratory Quality Assurance / Quality Control procedures are as described in the Company's National Instrument 43-101 Technical Report filed on March 21, 2005. This report is available at [www.sedar.com](http://www.sedar.com).
5. Samples are prepared and analysed at Humac Laboratories – Mwanza, Tanzania

6. The Qualified Person for the release of this exploration information is Michael Griffiths AusIMM, Director of Currie Rose Resources Inc. and Managing Director of Sub-Sahara Resources NL.
