**Drilling Commences at High Priority Targets  
Mabale Hills Gold Project, Tanzania**

Currie Rose Resources Inc. is pleased to announce that drilling has commenced at the Mabale Hills project in central Tanzania.

The drilling program is expected to consist of approximately 5,000 metres of Rotary Air Blast (RAB) drilling and if successful, 4,000 metres of Reverse Circulation (RC) drilling at the Simba, Dhahabu and Sizu Prospects. (See Mabale Hills location map at [www.currierose.com](http://www.currierose.com).)

The Project is characterised by steeply dipping, highly deformed banded ironstone formations (BIF's) surrounded by acid volcanics, with granitoids to the west and east. Gold mineralisation has been identified in quartz veins and disseminated in BIF's and cherts. Exploration by the Company has generated a number of significant drill targets including the previous success at the Mwamazengo discovery, the Sisu River anomaly that lies on strike with the +500,000oz Iamgold Kitongo gold discovery and the Dhahabu prospect situated approximately 7km north of Mwamazengo.

The program will drill test a number of anomalies that have coincident geophysical, geochemical and geological signatures. The Simba Prospect is only 700metres north east of the Mwamazengo and it lies on a fold closure and is a high priority target that if successful will add further scope to the known mineralisation at Dhahabu and Mwamazengo.

The drilling results will be announced over the coming weeks.

ON BEHALF OF THE BOARD OF DIRECTORS

“Harold Smith”

Harold Smith, President

The Qualified person for the release of this exploration information is Michael Griffiths MAusIMM, Director of Currie Rose Resources Inc. and Managing Director of Sub-Sahara Resources NL.
